

MANUALLY MATCHING AN ECG TO AN ORDER

If you completed an ECG without an existing order in Millennium, or you completed an ECG during Millennium downtime and the ECG for some reason did not match to the order in PowerChart:

1. Navigate to **Cardiovascular** by clicking the  icon in the toolbar in FirstNet or in PowerChart.
2. Right-click your **patient's ECG order** in the Cardiovascular worklist.
3. Hover over **Action**.
4. Hover over **Match Study**. Select **Match Study** in the cascading menu.
5. In the **Match Study window**, the ECG you completed and transmitted from the ECG cart should appear with the patient demographics you entered under "Select an Unmatched Study".
6. Select the ECG study and click **Match**.
7. In Cardiovascular worklist, check the Study State column for the patient. It should be listed as **Matched Viewable**. In FirstNet, your patient should have a completed ECG order icon and the ECG should be viewable in Millennium.
